

Key Benefits

- One button click to transfer voice files.
- Protect patient and provider information with multi-layer security and file encryption.
- User-friendly and helpful reports for checking activity statistics, job status, job numbers assigned for tracking, etc.
- Speed the bill submission process
- Provide access to files from any location, at any time, and by multiple users
- Enhance clinical decision making with real-time or online access to medical transcription information

Backlog! Not a problem anymore.

Our transcription solution enables you to reduce your backlog... Hence decreasing the operational cost.

USER FRIENDLY INTERFACE

With its user friendly interface, our Transcription Solution provides a simple set of menus and drop-down lists for easy and efficient file management and reporting.

MANAGEMENT OF TRANSCRIPTION JOBS

For managing transcription jobs, our solution displays real-time status reports and detailed logs indicating when files were sent, file history, job number, file size, etc.— all the information you need to trace every step of the process.

Pragmedic Transcription Solution

Practical, Simple & Efficient Patient Information Management

pragmedic
SOLUTIONS

Overview

Pragmedic has incorporated a built-in Medical Transcription Solution within its Clinical Informatics Solution. This Transcription Solution has the capability of enabling the provider to dictate and save the files and at the same time upload them over the server. Whereas, at the transcriptionist's end, same solution will be used to work over the dictated files for transcription and upload them back. Again the whole cycle, will be completed within the same system when the files are received at Quality Assurance's end and uploaded back to the provider after the approval without even using any third party solution for recording, listening, and uploading the files.

By implementing the Pragmedic's Transcription Solution, practices can reduce transcription backlog by more than 30 percent. The reduced backlog can then result in improved transcribed note turnaround times and can give the practice an ability to reduce their transcriptionists pool.

THE CLICK OF A SINGLE BUTTON

Our Transcription Module extends the transcription services by securely transferring voice files from hand-held devices and remote dictation systems. Integrated with PCIS™, our Transcription Solution allows you to quickly submit voice files for transcription. Transcription begins by naming voice files based on your job type, work type, and other parameters. Files are then transferred to the transcriptionists for transcription with the click of a single button.

In a practice that is heavily dependant on transcription, the amount of transcription in backlog is an important benchmark. Decreasing backlog provides value by decreasing costs like, overtime expense, and transcription line cost. For such practices, the system increases cash flow through faster charge submission and a more efficient workflow.

In addition to the improvements from reduced backlog, our Transcription Solution can have an impact on workflow efficiencies with the physician support staff. For example, when transcription is in backlog, the information is not available when it is required for a referral, or claims payment. Staff must then be taken away from their tasks to track down the information, disrupting the already complex workflow of managing patient information. With the transcription readily available online, support staffs are not interrupted for a paper chase and can concentrate on patient care-related services.
